

# Bunn Coffee Maker VPR-APS

1. **Plug it in;** it takes 20 minutes to heat up.

The coffeemaker can stay plugged in all day.

While you wait:

2. Place (large) filter in basket
3. Measure coffee into filter / basket  
(about 1 cup grounds per brew)
4. Measure water (1.9 liters / 2 quarts)
5. Rinse airpot with hot water (optional)
6. Place open airpot under basket

**AFTER** tank has been plugged in 20 minutes:

7. Pour water into top; coffee brews almost instantly
8. Discard old filter & grounds in compost
9. Additional coffee, repeat steps 2 – 8

(No additional need to wait; recycles fast)

**Before leaving, Please:**

- Discard the used filter.
- Unplug the machine.

Water poured here **AFTER** machine is plugged in for 20 minutes
